## PIAA Preparticipation Physical Evaluation Form – page 3

Understanding of Eligibility Rules and Schuylkill Valley Athletic Code – I hereby acknowledge that I am familiar with the requirements of PIAA concerning the eligibility of students at PIAA member schools to participate in Inter-School practices or Scrimmages and Contests involving PIAA member schools. Such requirements, which are posted on the PIAA web site at <a href="https://www.piaa.org">www.piaa.org</a>, include, but are not necessarily limited to age, amateur status, school attendance, health, transfer from one school to another, season and out-of-season rules and regulations, semesters of attendance, seasons of sports participation and academic performance. I further acknowledge that both the student contained herein and the parent/guardian have read and are familiar with the Schuylkill Valley Athletic/Activity Code.

**Disclosure of Records Needed to Determine Eligibility** – To enable PIAA to determine whether the herein named student is eligible to participate in interscholastic athletics involving PIAA member schools and to determine academic awards, I hereby consent to the release to PIAA and school district personnel of any and all portions of school record files, beginning with the seventh grade, of the herein named student specifically including, without limiting the generality of the foregoing, birth and age records, name and residence address of parent(s) or guardian(s), residence address of the student, health records, academic work completed, grades received and attendance data.

Permission to Use Name, Likeness, and Athletic Information – I consent to PIAA and SVSD's use of the herein named student's name, likeness, and athletically related information in video broadcasts and re-broadcasts, webcasts and reports of Inter-School Practices or Scrimmages and Contests, promotional literature of the Association, and other materials and releases related to interscholastic athletics.

Permission to Administer Emergency Medical Care – I consent for an emergency medical care provider to administer any emergency medical care deemed advisable to the welfare of the herein named students while the student is practice for or participating in Inter-School Practices or Scrimmages and Contests. Further, this authorization permits, if reasonable efforts to contact me have been unsuccessful, physicians to hospitalize, secure appropriate consultation, to order injections, anesthesia (local, general, or both) or surgery for the herein named student. I hereby agree to pay for physicians' and/or surgeons' fees, hospital charges, and related expenses for such emergency medical care. I further give permission to the school's athletic administration, coaches and medical staff to consult with the Authorized Medical Professional who executes Section 6 regarding a medical condition or injury to the herein named student.

Confidentiality – The information on this Preparticipation Form shall be treated as confidential by school personnel. It may be used by the school's athletic administration, coaches and medical staff to determine athletic eligibility, to identify medical conditions and injuries, and to promote safety and injury prevention. In the event of an emergency, the information contained in this form may be shared with emergency medical personnel. Information about an injury or medical condition will not be shared with the public or media without written consent of the parent(s) or guardian(s).

I hereby certify that to the best of my knowledge that the aforementioned information is true and complete.

#### UNDERSTANDING OF RISK OF CONCUSSION AND TRAUMATIC BRAIN INJURY

What is a concussion? A concussion is a brain injury that is caused by a bump, blow or jolt to the head or body. It can change the way a student's brain normally works. It can occur during practices or contests in any sport and can happen even if a student has not lost consciousness. It is serious even if a student has been "dinged" or "had their bell rung." All concussions are serious. A concussion can affect a student's ability to do schoolwork and other activities (such as playing video games, working on a computer, studying, driving or exercising). Most students with a concussion get better, but it is important to give the concussed student's brain time to heal. Most students with a concussion get better, but it is important to give the concussed student's brain time to heal.

What are the symptoms of a concussion? Concussions cannot be seen; however, in a potentially concussed student, *one or more* of the following symptoms listed may become apparent and/or the student "doesn't feel right" soon after, a few days after, or even weeks after the injury.

- Headache or "pressure" in head
- Balance problems or dizziness
- Bothered by light or noise

- Nausea or vomiting
- Double or blurry vision
- Feeling sluggish, hazy, foggy, or groggy
- Confusion
- Memory problems
- Difficulty paying attention

What should students do if they believe that they or someone else may have a concussion? Students feeling any of the symptoms set forth above should immediately tell their Coach and their parents. Also, if they notice any teammate evidencing such symptoms, they should immediately tell their Coach. The student will then be referred to the Schuylkill Valley Athletic Trainer and School Physician. These individuals will then follow the SV Concussion protocol in treating the student.

Concussed students should give themselves time to get better. If a student has sustained a concussion, the student's brain needs time to heal. While a concussed student's brain is still healing, that student is much more likely to have another concussion. Repeat concussions can increase the time it takes for an already concussed student to recover and may cause more damage to that student's brain. Such damage can have long term consequences. It is important that a concussed student rest and not return to play until the student receives permission from the Athletic Trainer and Team Physician and is symptom-free.

How can students prevent a concussion? Every sport is different, but there are steps students can take to protect themselves. Students should use proper sports equipment, including personal protective equipment. For equipment to properly protect a student, it must be the right equipment for the sport, position, or activity and it must be worn correctly and the correct size and fit. It must be used every time the student practices and/or competes. The student must also follow the coach's rules for safety and the rules of the sport and practice good sportsmanship at all time. If a student believes they may have a concussion: Don't hide it. Report it. Take time to recover.

I hereby acknowledge that I am familiar with the nature and risk of concussion and traumatic brain injury while participating in interscholastic athletics, including the risks associated with continuing to compete after a concussion or traumatic brain injury.

#### PIAA Preparticipation Physical Evaluation Form – page 4

#### UNDERSTANDING SUDDEN CARDIAC ARREST SYMPTOMS AND WARNING SIGNS

What is sudden cardiac arrest? Sudden Cardiac Arrest (SCA) is when the heart stops beating suddenly and unexpectedly. When this happens blood stops flowing to the brain and other vital organs. SCA is not a heart attack, which may cause SCA; however, they are not the same. A heart attack is caused by a blockage that stops the flow of blood to the heart. SCA is a malfunction in the heart's electrical system, causing the heart to suddenly stop beating.

How common is SCA in the United States and what are the warning signs? There are about 300,000 cardiac arrests outside hospitals each year. About 2,000 patients under 35 die of SCA each year. Although SCA happens unexpectedly, some people may have signs or symptoms, such as:

- Dizziness - Fatigue - Lightheadedness

- Weakness - Shortness of breath - Nausea

- Difficulty breathing - Vomiting - Racing or fluttering heartbeat (palpitations)

- Chest pains - Syncope (fainting)

What are the risks of practicing or playing after experiencing these symptoms? There are risks associated with continuing to practice or play after experiencing these symptoms. When the heart stops, so does the blood that flows to the brain and other vital organs. Death or permanent brain damage can occur in just a few minutes. Most people who have SCA die from it. Any student-athlete who has signs or symptoms of SCA must be removed from play (including all athletic activity). The symptoms can happen before, during or after activity. Before returning to play, the athlete must be evaluated and clearance to return must be in writing. The evaluation must be performed by a licensed physician, certified registered nurse practitioner or cardiologist. These individuals may consult any other licensed or certified medical professionals.

## I have reviewed and understand the symptoms and warning signs of SCA

#### ACT 73 – PEYTON'S LAW – ELECTROCARDIOGRAM TESTING FOR STUDENT ATHLETES

The Act is intended to keep student-athletes safe while practicing or playing. Please review the warning signs/symptoms and know that you can request, at your expense, an electrocardiogram (EKG or ECG) to help uncover hidden heart issues that can lead to SCA.

## Why Do Heart Conditions That Put Youth at Risk Go Undetected?

- Up to 90 percent of underlying heart issues are missed when using only the history and physical exam;
- Most heart conditions that can lead to SCA are not detectable by listening to the heart with a stethoscope during a routine physical; and
- Often, youth don't report or recognize symptoms of a potential heart condition.

#### What is an Electrocardiogram (EKG or ECG)?

An ECG/EKG is a quick, painless and noninvasive test that measures and records a moment in time of the heart's electrical activity. Small electrode patches are attached to the skin of your chest, arms and legs by a technician. An ECG/EKG provides information about the structure, function, rate and rhythm of the heart.

## Why Add an ECG/EKG to the Physical Examination?

Adding an ECG/EKG to the history and physical exam can suggest further testing or help identify up to two-thirds of heart conditions that can lead to SCA. An ECG/EKG can be ordered by your physician for screening for cardiovascular disease (ICD 10 code: Z13.6) or for a variety of symptoms such as chest pain, palpitations, dizziness, fainting, or family history of heart disease and will generally be paid for by insurance.

- ECG/EKG screenings should be considered every 1-2 years because young hearts grow and change.
- ECG/EKG screenings may increase sensitivity for detection of undiagnosed cardiac disease but may not prevent SCA.
- ECG/EKG screenings with abnormal findings will need to be evaluated by trained physicians.
- If the ECG/EKG screening has abnormal findings, additional testing may need to be done (with associated cost and risk) before a diagnosis can be made, and may prevent the student from participating in sports for a short period of time until the testing is completed and more specific recommendations can be made.
- The ECG/EKG can have false positive findings, suggesting an abnormality that does not really exist after more testing (false positive findings occur less than 3% of the time when ECG/EKGs are read by a medical practitioner proficient in ECG/EKG interpretation of children, adolescents and young athletes.).
- ECGs/EKGs result in fewer false positives than the current history and physical exam (10%).

The American College of Cardiology/American Heart Association guidelines do not recommend an ECG or EKG in asymptomatic patients but do support local programs in which ECG or EKG can be applied with high-quality resources.

Removal from play/return to play - Any student-athlete who has signs or symptoms of SCA must be removed from play. The symptoms can happen before, during, or after activity. Play includes all athletic activity.

Before returning to play, the athlete must be evaluated. Clearance to return to play must be in writing. The evaluation must be performed by a licensed physician, certified registered nurse practitioner, or cardiologist (heart doctor). The licensed physician or certified registered nurse practitioner may consult any other licensed or certified medical professionals.

I have reviewed this form and understand the symptoms and warning signs of SCA. I have also read the information about the electrocardiogram testing and how it may help to detect hidden heart issues.
